

Voya Core Plus Trust Fund

Strategy-At-A-Glance	
Fund Description	The Voya Core Plus Trust Fund is a collective investment trust fund maintained by Voya Investment Trust Co., available to eligible qualified retirement plan clients. Designed exclusively for qualified retirement plans and their participants, the fund is not available to individual retail investors.
Share Class Inception Date	08/04/03
Benchmark	Bloomberg Barclays U.S. Aggregate Index
1-year Turnover Ending 06/30/21	191.03
Annual Expense Ratio (%) ¹	0.02%
Annual Expense Ratio per \$1,000 ¹	\$0.16

¹ The investment management fee is charged outside of the fund NAV, therefore the expense ratio calculations do not include the investment management fee.

Strategy Overview

The Core Plus Fixed Income strategy seeks to maximize total return over a full market cycle via a broadly diversified and well-balanced, multi-sector approach that employs the full spectrum the fixed income universe, including up to 20% of total portfolio allocation to below investment grade debt.

Investment Philosophy

We believe that intensive security level research paired with a broadly informed awareness of the economic and credit cycles are critical to identifying superior investment opportunities and managing downside risk.

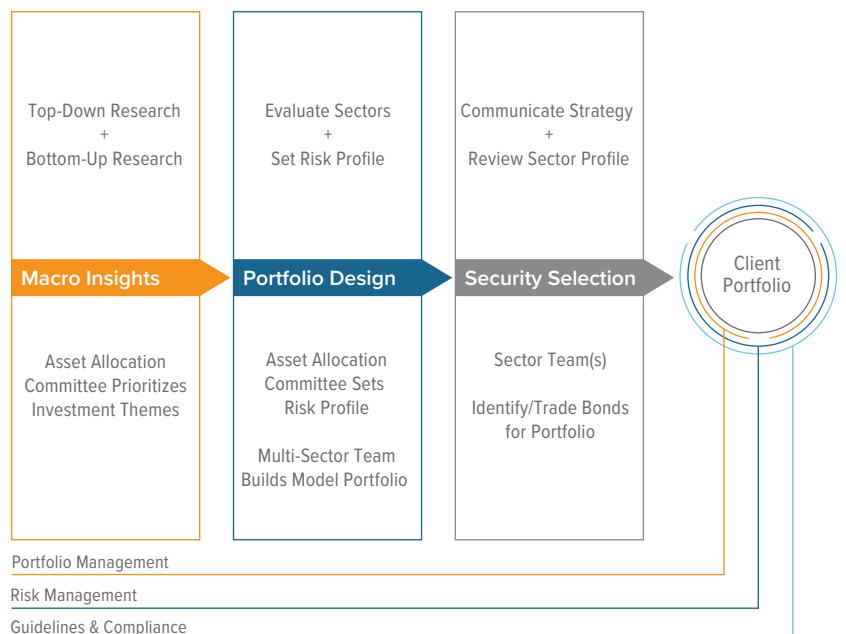

The following key beliefs underpin our investment philosophy:

- Security selection is a significant driver of risk and returns
- Nimble sector and sub-sector allocations capture relative value
- Risk management is critical throughout the entire investment process

These three key beliefs frame an integrated strategy that incorporates a dynamic blend of top-down and bottom-up approaches.

Investment Process

Supported by a seasoned team of over 200 fixed income professionals, our three-step process leverages the collective insights from across Voya's Fixed Income platform, incorporating both top-down and bottom-up research insights. First, our asset allocation committee deliberates and prioritizes investment themes impacting fixed income markets, offers unencumbered views regarding sectors and overall risk posturing. Next, the Head of Global Rates & Macro, the Head of Fixed Income Research, and the Head of Multi-Sector Portfolio Management then builds a model portfolio, incorporating client guidelines and objectives. Finally, individual sector teams are then responsible for identifying and trading specific bonds.

The firm relies upon quantitative models for certain investment strategies in developed currency markets.

INVESTMENT MANAGEMENT

Performance

Trust Share Class Performance

Performance quoted is past performance, is no guarantee of future results and assumes that dividends and distributions are reinvested. Current performance may be lower or higher. Investment value will fluctuate, and shares, when redeemed, may be worth more or less than original cost.

The gross-of-fees performance presented is reflective of trading costs but excludes the effect of management fees and other administrative fees related to the Collective Trust investment vehicle. A typical management fee schedule for this product is First \$50 million 30bp, Next \$50 million 25bp, Over \$100 million 20bp. Administrative and operating expenses which include, but are not limited to, custody, accounting, transfer agency and audit are reflected in the valuation of the fund. The Trustee has voluntarily determined to pay out of its resources any administrative expenses which exceed 10 bps.

Investment Commentary

Portfolio Review

For the quarter ending June 30, 2021, the Portfolio outperformed its benchmark, the Bloomberg Barclays U.S. Aggregate Bond index (the "index").

Outperformance was driven by sector allocation and security selection decisions, while duration and yield curve positioning detracted for the period.

Yields see-sawed early in the quarter, as inflation reports fueled ongoing concerns that the Federal Reserve (the "Fed") was falling behind curve. Those fears were short-circuited with the release of the dot plot from the Fed showing the voting members had pulled forward rate hike expectations into 2023, with two increases in the Fed Funds rate on the table. This news that the Fed was still diligent in its response to inflationary pressures triggered a rally in the U.S. dollar (USD) and a massive flattening in the yield curve as the 10-year Treasury yields fell to 1.43% before settling at 1.47% at quarter-end. While Treasuries rallied, agency mortgage-backed securities (MBS) trailed with rate volatility and growing speculation of a tapering in Fed purchases weighing on the sector. Meanwhile, continued expectations for solid growth as the world reopens, combined with a solid earnings season and consumer re-engagement helped corporate credit and securitized credit sectors produce solid returns. Credit curves flattened with lower-rated securities outperforming and the most cyclically sensitive sectors, including high-yield (HY) and emerging markets (EM) posting the best excess returns. The index returned +1.83% in the second quarter but remains at -1.60% year-to-date (YTD).

Sector allocations in both securitized credit and corporate sectors contributed. In securitized credit, an underweight in agency MBS that we increased during the quarter added, as the sector underperformed, while security selection with the sector offset some of these gains. Overweights to non-agency residential mortgage-backed securities (RMBS), commercial mortgage-backed securities (CMBS) and asset-backed securities (ABS) all added to performance, as these sectors continued to respond positively to the breadth of the economic recovery. In addition, our more credit sensitive investments in CMBS and ABS – including high-yielding collateralized loan obligations (CLOs) – further boosted

returns. Corporate allocations to both investment-grade (IG) and HY securities also added, as spreads continued to grind tighter. In addition, IG security selection that favored BBB-rated issuers modestly added. While EM sector allocation did not impact performance, security selection that favored Latin American and African sovereign risk added to our performance. Duration and yield curve positioning detracted over the period. Our short duration posture relative to the benchmark and a bias towards a curve steepener detracted as the treasury market rallied and the curve flattened dramatically after the release of the Fed's quarterly economic projections.

Current Strategy and Outlook

Re-openings across developed markets (DM) are driving synchronous U.S. and European recoveries. Meanwhile, China is reining in policy support and accepting a lower growth rate as it shifts composition to domestic growth. While spreads across many sectors have reached uncomfortably tight levels, the macroeconomic backdrop remains supportive and we see few catalysts that could trigger a correction in corporate and securitized credit sectors. Shareholder friendly activity is on the rise as Covid-19 challenges continue to ebb, creating idiosyncratic risks for some corporate issuers. We believe securitized credit can continue to grind tighter – particularly more credit sensitive tranches, benefiting from the breadth and depth in the U.S. recovery. Agency MBS has been overwhelmed by rate volatility and the looming risk of Fed tapering which we anticipate could occur in 4Q21 or 1Q22, a headwind we expect to continue.

With the Fed signaling to the market the likelihood of rate hikes in 2023, we see upward pressure on long-term yields. Inflation and its expectation will remain a key driver for rates in the second half of the year. While we see a higher inflation baseline, ultimately, we do not expect structural inflation to take hold that could create a significant headwind for fixed income investors. As a result, we expect the upside risk to the 10-year Treasury yield to be up to 2% between now and year-end.

Bloomberg Barclays U.S. Aggregate Index is composed of U.S. securities in Treasury, Government-Related, Corporate, and Securitized sectors that are of investment-grade quality or better, have at least one year to maturity, and have an outstanding par value of at least \$250 million.

Indexes do not reflect fees, brokerage commissions, taxes or other expenses of investing, and investors cannot directly invest in an index.

Up / Down Capture Ratio

Credit Quality – is calculated based on S&P, Moody's and Fitch ratings. If the ratings from all 3 rating agencies are available, securities will be assigned the Median rating based on the numerical equivalents. If the ratings are available from only two of the agencies, the more conservative of the ratings will be assigned to the security. If the rating is available from only one agency, then that rating will be used. Any security is not rated by S&P, Moody's, or Fitch is placed in the NR (Not Rated) category. Internal ratings will not be used for any security. Ratings do not apply to the Fund itself or to the Fund shares. Ratings are subject to change. Ratings are a measure of quality and safety of a bond based on the financial condition of the issuer. Generally accepted, AAA is the highest grade (best) to D which is the lowest (worst).

Past performance does not guarantee future results. Characteristics may be adjusted to exclude securities for which data is not available or for extreme data outliers via commonly used trimming methodologies. Holdings are subject to change. The information shown is supplemental only. Totals may not equal due to rounding.

Voya Investment Management

Voya Investment Management is the asset management business of Voya Financial, a Fortune 500 company with over 6,000 employees seeking to help clients plan, invest and protect their savings. Voya Investment Management manages approximately \$252 billion* in assets across fixed income, senior loans, equities, multi-asset strategies and solutions, private equity, and real assets. Drawing on over 40 years of experience and the expertise of 250+ investment professionals, the firm's capabilities span traditional products and solutions as well as those that cannot be easily replicated by an index.

At Voya Investment Management, a heritage of partnership and innovation serves clients at every step. Our award winning culture is deeply rooted in a client-centric approach to help investors meet their goals — from insurance companies, corporate and public pension funds, sovereign wealth funds, endowments and foundations, and consultants to intermediaries, as well as individual investors.

*As of 03/31/21. Voya IM assets are calculated on a market value basis and include proprietary insurance general account assets of \$42 billion.

The principal risks are generally those attributable to bond investing. Holdings are subject to market, issuer, credit, prepayment, extension and other risks, and their values may fluctuate. Market risk is the risk that securities may decline in value due to factors affecting the securities markets or particular industries. Issuer risk is the risk that the value of a security may decline for reasons specific to the issuer, such as changes in its financial condition. The strategy may invest in mortgage-related securities, which can be paid off early if the borrowers on the underlying mortgages pay off their mortgages sooner than scheduled. If interest rates are falling, the strategy will be forced to reinvest this money at lower yields. Conversely, if interest rates are rising, the expected principal payments will slow, thereby locking in the coupon rate at below market levels and extending the security's life and duration while reducing its market value. High yield bonds carry particular market risks and may experience greater volatility in market value than investment grade bonds. Foreign investments could be riskier than U.S. investments because of exchange rate, political, economic, liquidity and regulatory risks. Additionally, investments in emerging market countries are riskier than other foreign investments because the political and economic systems in emerging market countries are less stable.

The strategy employs a quantitative model to execute the strategy. Data imprecision, software or other technology malfunctions, programming inaccuracies and similar circumstances may impair the performance of these systems, which may negatively affect performance. Furthermore, there can be no assurance that the quantitative models used in managing the strategy will perform as anticipated or enable the strategy to achieve its objective.

Participation in a Collective Trust Fund is limited to eligible trusts that are accepted by the Trustee as Participating Trusts. Eligible trusts generally include (i) certain employee benefit trusts exempt from federal income taxation under Code Section 501(a); (ii) certain governmental plans or units described in Code Section 414(d), Code Section 457(b), and Code Section 818 (a) (6); (iii) certain commingled trust funds exempt from federal income taxation under Code Section 501(a); and (iv) certain insurance company separate accounts as defined in the Investment Company Act section 2(a) (17). Neither the Fund nor units of beneficial interest in the Fund are registered under the Investment Company Act of 1940 or the Securities Act of 1933 in reliance on an exemption, under these acts applicable to collective trust funds maintained by a bank for certain types of employee benefit trusts. Collective Investment Trusts are not mutual funds and are not required to file a prospectus or registration statement with the Securities and Exchange Commission and, accordingly, neither is available.
