Group Head, Chief Investment Officer, Leveraged Credit Group

Mohamed Basma, CFA
Managing Director, Head of Senior Loans & Global CLOs

Tamara Wieging
Senior Vice President, Client Portfolio Manager

Weekly Notables

- Performance in the US loan market remained under pressure, as a high inflation print continued to fuel market volatility. The Morningstar® LSTA® US Leveraged Loan Index (Index) returned -0.36% for the seven-day period ended October 13. The average Index bid price decreased by 55 bp, closing out the week at 92.06.
- In the primary market, arrangers launched a handful of deals this week, most of which represented LBO-related activities. Turning to the forward pipeline, net new supply expected to enter the market (net of anticipated repayments) decreased to \$9 billion, compared to \$13.1 billion last week.
- Secondary trading levels softened this week. In terms of rating cohorts, Double BBs were slightly ahead of lower rated credits and returned -0.09% for the week. Meanwhile, Single-Bs and CCCs continued to trail given persistent risk-off tone.
- On the demand front, CLO managers priced one new deal this week, bringing YTD issuance to \$106.68 billion. Meanwhile, retail loan funds experienced an outflow of \$1.09 billion for the week ended October 12 (Lipper FMI).
- There were no defaults in the Index during the week.

Investors cannot invest directly in the Index.** *The Index's average nominal spread calculation includes the benefit of LIBOR floors (where applicable).

Unless otherwise noted, the source for all data in this report is Pitchbook Data, Inc/LCD. Pitchbook Data/LCD does not make any representations or warranties as to the completeness, accuracy or sufficiency of the data in this report.

¹ Assumes 3 Year Maturity. Three-year maturity assumption: (i) all loans pay off at par in 3 years, (ii) discount from par is amortized evenly over the 3 years as additional spread, and (iii) no other principal payments during the 3 years. Discounted spread is calculated based upon the current bid price, not on par. Please note that Index yield data is only available on a lagging basis, thus the data demonstrated is as of October 7, 2022.

² Excludes facilities that are currently in default.

³ Issuer default rate is calculated as the number of defaults over the last twelve months divided by the number of issuers in the Index at the beginning of the twelve-month period. Principal default rate is calculated as the amount defaulted over the last twelve months divided by the amount outstanding at the beginning of the twelve-month period.

General Risks for Floating Rate Senior Loans: Floating rate senior loans involve certain risks. Below investment grade assets carry a higher than normal risk that borrowers may default in the timely payment of principal and interest on their loans, which would likely cause the value of the investment to decrease. Changes in short-term market interest rates will directly affect the yield on investments in floating rate senior loans. If such rates fall, the investment's yield will also fall. If interest rate spreads on loans decline in general, the yield on such loans will fall and the value of such loans may decrease. When short-term market interest rates rise, because of the lag between changes in such short-term rates and the resetting of the floating rates on senior loans, the impact of rising rates will be delayed to the extent of such lag. Because of the limited secondary market for floating rate senior loans, the ability to sell these loans in a timely fashion and/or at a favorable price may be limited. An increase or decrease in the demand for loans may adversely affect the loans.
